

**IN THE SPECIFICATION**

Please add the following heading before numbered line 1 at page 1 of the specification:

**TITLE OF THE INVENTION**

**APPARATUS AND A METHOD FOR SUPPLYING INFORMATION**

Please add the following headings before numbered line 3 at page 1 of the specification:

**BACKGROUND OF THE INVENTION**

**1. Field of the Invention**

This invention relates to apparatus and a method for supplying information. In particular, this invention relates to apparatus and a method for supplying to a subscriber via a mobile telecommunications network different types of information that are updated in real time, for example, information relating to financial markets.

Please add the following heading before numbered line 10 at page 1 of the specification:

**2. Related Art**

Information relating to financial markets changes rapidly throughout the trading day to such an extent that, at busy periods or when there is particular interest in a particular stock, option or currency, changes occur as frequently as once a second or even more rapidly. Although advances in telecommunications and, in particular, satellite telecommunications technology enable traders to receive continually updating finance and market information on desktop personal computers in their offices over dedicated communication links, the bandwidth of the current GSM standard mobile

telecommunications network does not allow the supply of real time updating information such as financial market information over the mobile telecommunications network, so making it difficult for traders and the like to keep up to date with changes in the financial markets when away from their offices. Although changes envisaged to the mobile telecommunications standard will increase the available bandwidth over the mobile telecommunications networks, this increase is unlikely to be sufficient to enable receipt of real time updating information such as financial market information over a mobile telecommunications network.

Please add the following heading before numbered line 8 at page 2 of the specification:

BRIEF SUMMARY OF THE INVENTION

It is an aim of the present information to provide an apparatus and method for enabling a subscriber to receive via a mobile telecommunications network information that is updated in real time such as financial market information.

Please add the following heading before numbered line 9 at page 5 of the specification:

BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S)

Embodiments of the present invention will now be described, by way of example, with reference to the accompanying drawings, in which:

Please add the following heading before numbered line 3 at page 8 of the specification:

DETAILED DESCRIPTION OF THE INVENTION

Figure 1 shows a diagrammatic representation of a system 1 for supplying continually updating or changing information for sets of data to a plurality of subscribers.
